

Verizon Business Mobile Internet Security FAQs

What is Verizon Business Mobile Internet Security?

Verizon Business Mobile Internet Security is a security solution for smartphones connected to the Verizon mobile network that helps protect against known internet threats.

What features are included in Verizon Business Mobile Internet Security?

- **In-network security:** Inspects websites, file downloads and web traffic for malicious intent before reaching the devices
- **Robust mobile threat protection:** Helps protect your connected smartphones from accessing malicious websites and internet content containing malware.
- **Phishing protection:** Helps defend against mobile attempts to steal sensitive information such as login credentials and financial data
- **Protection from online threats:** Helps safeguard your business smartphones with powerful antivirus, helping take the worry out of engaging in online activity and transactions.

- **Zero-touch protection:** Activates the security features as soon as your smartphones connect to the Verizon mobile network, with nothing to install or download

Why is this solution important to my business?

Verizon Business Mobile Internet Security helps prevent unauthorized access to business and customer information on your smartphones when they are connected to the Verizon mobile network, helping you avoid financial losses and reputational damage.

What mobile threats does Verizon Business Mobile Internet Security help protect against?

The solution checks for cyberthreats such as ransomware, Trojan horses, adware, viruses, bots and phishing.

How much does this solution cost?

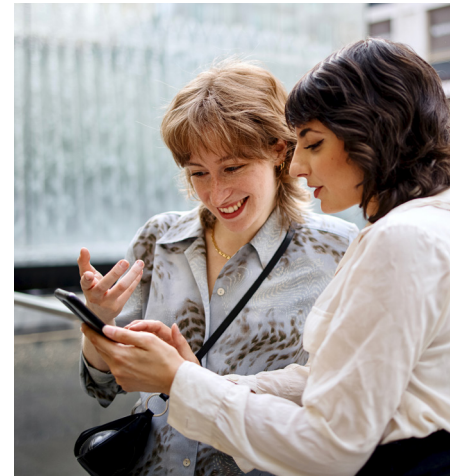

Verizon Business Mobile Internet Security has a budget-friendly price with no long-term commitment for smartphones on eligible plans, regardless of make or model.

How do I get started?

It's easy to get started. Simply sign up through your My Business account or reach out to your Verizon representative.

Will this service slow down my internet connection?

No, Verizon Business Mobile Internet Security is enabled at the Verizon mobile network level. Any threats are mitigated before information is sent to your smartphones, ensuring your internet speed is not impacted by the security features.
