

Verizon Frontline public safety

Before the call, through the response,
beyond the recovery. Verizon Frontline.

Verizon Frontline is a trusted partner with public safety agencies, bringing communication and connectivity to members of law enforcement, firefighters and other first responders. We are proud to be the network trusted by first responders for 30 years and counting.

Today, more than 45K agencies rely on Verizon Frontline, making us the #1 network of choice for first responders.¹ Verizon Frontline provides the coverage they need when so much is on the line. Powered by America's most reliable 5G network.²

What is Verizon Frontline?

Verizon Frontline is the advanced network and technology for first responders. Through three-plus decades of trusted public safety partnership, we've provided first responders with an award-winning network, enabled with priority and preemption; a dedicated [crisis response team](#); an [innovation program](#); and best-in-class, 24/7 dedicated customer support.

Who is eligible for Verizon Frontline?

Verizon Frontline is available to public safety organizations, first responders, a select group of specialists and other critical organizations. To meet their evolving needs, we work side by side with the public safety community to understand their challenges and build reliability.

Is there really a dedicated wireless network for public safety?

Band 14 is a 20 MHz slice of radio spectrum in the 700 MHz band. Congress allocated Band 14 to public safety and authorized FirstNet to use it to support its deployment of a nationwide public-safety broadband network.

Verizon Frontline has priority services that give access to public safety first and preemption capabilities to help ensure first responders stay prioritized during critical situations.³ Verizon's 4G LTE network uses Band 13 along with the reliability of Verizon's 5G network. Bands 13 and 14 are adjacent in the 700 MHz band and have the same favorable technical characteristics that support wireless broadband communications.

In practice, Band 14 is not used exclusively for public safety.⁴ Verizon also does not use Band 13 for first responders alone. That means user experiences will vary depending on the carrier and the network that carrier has built. For instance, to enhance the capacity and experience provided by Band 13, Verizon has built out its 4G LTE network with advanced technologies that allow the same band of spectrum to carry large amounts of traffic efficiently.

Bottom line: When evaluating support for public safety communications, it's important to focus on the network as a whole – and whether that network prioritizes first responders.

Do all public safety agencies need to operate on the same band of the wireless spectrum?

No. With network interoperability, public safety data will be able to travel across multiple bands of spectrum. Verizon supports network, system, application and device interoperability across all participating commercial carriers and agencies.

Interoperability is crucial to the safety of first responders and the organizations that support them, no matter what network, apps or devices they use. We are continually enhancing our network and capabilities to meet the mission of enabling voice and data interoperability across agencies, jurisdictions, devices and networks.

Verizon does more than support intercarrier and interagency interoperability; our network is built to be interoperable and adhere to the 3rd Generation Partnership Project standards.

How does preemption work?

We truly prioritize first responders. The Verizon Frontline advanced preemption system gives top priority to first responder connections across 4G LTE and 5G networks. When network demand surges, preemption automatically gives first responder personnel priority access to the network. This helps ensure that public safety can stay on mission, even in times of high network use.

What is Verizon Frontline Network Slice?

With Verizon Frontline Network Slice, you can turn your emergency vehicle into a mobile command center.⁵ Powered by America's most reliable 5G network.² Verizon Frontline Network Slice - Connected Vehicle, the first solution available under the Verizon Frontline Network Slice portfolio, is for first responders exclusively, offering powerful in-vehicle connectivity to access mission-critical resources and information in near real time. This 5G network slice is like a custom lane on our network, tailored to specific needs.

Does Verizon provide additional support during emergencies and other situations?

Yes. Wherever you need us, the [Verizon Frontline Crisis Response Team](#) shows up experience-equipped, and ready 24/7. We are the only network with a dedicated crisis response team available around the clock to support first responders and the communities they serve in any crisis.

The Verizon Frontline Crisis Response Team includes multidisciplinary professionals with more than 300 years of combined service in the military, public safety and advanced technology. They team up with public safety agencies to provide coordinated action and support during trainings as well as natural disasters and emergencies—to Verizon and non-Verizon customers.

Verizon Frontline ensures first responders stay supported when it matters most with products and solutions designed to keep first responders connected. This vast array of resources includes satellites, power units, backup connections and portable generators.

From mission preparedness to crisis response, through mitigation and recovery, we adapt to the emerging needs of the front lines, helping ensure first responders have the speed, coverage and security they need during critical situations.

Does it create a bigger security risk to allow public safety traffic to interoperate with other wireless networks?

Not necessarily. Network security is a top concern for network providers, and it's up to each provider to build in security measures that help protect your voice and data communications. For example, mobile private network service isolates your data from all other traffic so no unauthorized traffic can travel over the network. This eliminates the risks of unsolicited traffic from the internet, helping ensure greater security and better performance.

The right professional services teams, backed by years of security experience, help our customers identify and resolve security risks within their network infrastructures.

How important is end-to-end encryption?

True end-to-end data security is critical and Verizon offers solutions that help to meet the needs of first responders. Application-layer traffic encryption provides the source-to-destination security while the benefit of network-layer encryption provides for secure transport. Where varying network transit paths exist and lack network-layer encryption, then the application-layer encryption continues to provide security.

As a recognized leader in network and security services, Verizon offers a comprehensive security assessment that evaluates all aspects of an organization's security controls. Verizon conducts in-depth research to understand the threats against specific industries and specific technologies. Our expertise and insight give first responders a head start on optimizing their security programs.

The following two recent research reports from Verizon can help you better understand why we're a leader in security—and how we can help your agency improve your security program.

How is Verizon working to improve the way public safety agencies operate in the future?

Verizon Frontline is built on an adaptive, intelligent platform that prioritizes first responders. This helps ensure that those on the front lines get the information they need when it matters most, automatically preempting non-mission-critical actions.

Verizon is at the forefront of emergency response technology with the [Verizon Frontline Innovation Program](#). A catalyst for innovative public safety solutions, this program works alongside first responders to understand their needs and sources leading technology solutions from the global entrepreneurial community. We've developed wireless network solutions through the Verizon Frontline Innovation Program, including THOR—our Tactical Humanitarian Operations Response 5G emergency mobile command center. This is just one of the many dynamic innovations we've explored to leverage the full power of our 5G network. These advances help expand coverage and provide network continuity following a disaster. And we'll continue to provide open and nonproprietary services, which helps your first responders communicate with other first responders and your agency collaborate with other agencies.

Partnering with first responders and forward-thinking companies allows us to develop cutting-edge and first-of-their-kind solutions to support the changing needs of public safety. This helps improve execution for every stage of a mission as well as crisis response preparedness. It also helps transform emergency management.

Why is Verizon using network virtualization?

Network virtualization enables Verizon to make updates and upgrades quickly, without slowing down your frontline workers. We believe that with network virtualization, Verizon Frontline can make upgrades quickly so hardware upgrades don't slow down frontline workers. We believe that investing in advanced technologies, such as priority, preemption and exceptional quality of service, will provide the greatest long-term benefits to our customers.

What impact is 5G having on public safety?

On the front lines, every detail is critical and every second counts. That's why Verizon Frontline is built for 5G. The transformative speeds and reliability of 5G can help public safety agencies improve decision-making and deliver more accurate information to the front lines faster. 5G networks are also more adaptive, which is important in mission-critical responses.

Why should I choose Verizon Frontline for public safety communications?

More first responders choose Verizon Frontline to help them stay connected when it matters most. When lives are at stake, first responders need a network that truly prioritizes them and helps them stay connected in both routine and extreme situations. Verizon Frontline was designed for 5G so you can take advantage of the next wave of public safety innovations. Consider these facts:

- Verizon is the #1 network choice in public safety.¹
- Verizon is America's most reliable 5G network.²
- We have deep roots with the first responder community and more than three decades of experience working with public safety—with the network that more than 45K agencies rely on, dedicated local support teams and 24/7 service.
- Our 5G network delivers high speeds, low latency and large capacity, so first responders can work more safely and effectively using the latest innovations and lifesaving applications for public safety.

How do I sign up for Verizon Frontline?

To partner with Verizon Frontline, visit our [Contact Sales](#) page. The process typically includes verifying eligibility, discussing your organization's needs and selecting the appropriate plan and devices. You also can contact your Verizon Frontline Account Representative or visit [verizon.com/frontline](https://www.verizon.com/frontline) to learn more.

1. Based on quarterly third-party wireless voice market share data, Q4 2025.

2. Based on RootMetrics® United States RootScore® Report: 2H 2025. Tested with best commercially available smartphones on three national mobile networks across all available network types. Your experiences may vary. RootMetrics rankings are not an endorsement of Verizon.

3. Mobile Broadband Priority allows customers to connect to the network with priority by leveraging a pool of radio resources dedicated to enable their connection. Mobile Broadband Priority identifies the user with an Access Priority setting, giving them higher priority for network access than lower Access Class users. Preemption automatically activates to provide approved personnel uninterrupted access to the network in those uncommon times when the network is fully utilized. 911 calls are never preempted.
