

# Mission-ready backup connectivity

Discover how Verizon business internet can help make smart military bases more resilient.

## Challenge

Implementing new backup connectivity involves more than just adopting new technology—it requires problem-solving on multiple fronts. Verizon fixed wireless access, also known as wireless business internet, can help you overcome a range of obstacles that can affect your backup connectivity, including:

- Limited backup connectivity, particularly in remote or challenging terrains
- Trouble integrating new technology with existing systems
- Hardwired solutions that can be expensive and time-consuming to install
- Complex procurement and regulatory hurdles for construction
- Security and compliance issues

## Solution

Verizon business internet helps deliver backup connectivity for increased reliability and preparedness. This readily deployable solution is available with 4G LTE and 5G options that easily integrate into your current connectivity ecosystem. Built to help support the demands of the modern military, business internet also meets the defense industry's Primary, Alternate, Contingency, Emergency (PACE) connectivity framework.

## Primary

For daily, go-to communications and during normal operations, business internet provides a reliable and efficient way to communicate.

## Alternate

If the primary network is degraded or unavailable, wireless business internet can be used as a backup option to help provide connectivity for common services such as point-of-sale transactions at the PX.

## Contingency

Verizon business internet can be used as a second backup to help maintain core functions when other alternate primary or alternate connectivity methods have failed.

## Emergency

The emergency system is used when other forms of communication are unavailable. During a crisis, Verizon business internet can aid in the rapid deployment of connectivity for both local and remote sites.

## Benefits

 **Strengthen network uptime.**  
You can increase network uptime and resilience across your smart base to help keep critical communications and data flowing.

 **Maintain and enhance base readiness.**  
With reliable failover across PACE categories, you'll have the connectivity you need.

 **Integrate easily.**  
Compatibility is not a problem. We offer 4G LTE and 5G backup connectivity solutions that can integrate with your existing IT.

 **Scale as required.**  
Your needs are always changing. Verizon business internet offers outstanding flexibility, unlike hardwired systems.

 **Run with less worry.**  
When failovers occur, you'll maintain near-seamless operations with Verizon business internet.

 **Modernize simply and economically.**  
Verizon business internet is a backup connectivity solution that's cost-effective with simplified procurement.

## Why Verizon

When it comes to our nation's defense, the stakes couldn't be higher. You can rely on us to build your backup connectivity because we have decades of experience serving the U.S. Department of Defense and other federal agencies. We understand how to implement technology quickly and efficiently without disrupting your operations. And with turnkey solutions running on America's most reliable 5G network,<sup>1</sup> Verizon can help you advance your mission every day.
